

# Does the IT sector have a similar or different Revenue amount than the Health Care sector in Year 1?

On the left of this slide are the histograms with the Year 1 Revenues for the IT and Health Care sectors in the company dataset.

Both histograms are rightly skewed, meaning that the Standard Deviation for each sector (both around a total of \$30,000,000,000) are spread out greatly from the mean.

Though the Standard Deviation is similar, the range for the IT sector is \$170,036,408,000. This is significantly higher than the range for the Health sector, showing to be \$121,195,662,000.

This means the variability in revenue is spread out depending on the Sub Industry in each sector.
